PROFESSIONAL SUMMARY

Oracle Fusion Technical Consultant with 2+ years at Mastek building Oracle Integration Cloud (OIC) integrations for Oracle Fusion HCM and Financials. Built and deployed 20+ inbound and outbound integrations and 10+ BI Publisher reports across three implementation projects and concurrent multi-client production support. Hands-on with REST and SOAP services, HDL, FBDI, SFTP file processing, and Oracle SQL and PL/SQL staging, validation and reconciliation, including mapping Oracle load errors back to source records for correction and reprocessing. Oracle APEX Cloud Certified Developer Professional.

SKILLS

Oracle Cloud: Oracle Integration Cloud (OIC), Oracle Fusion HCM, Oracle Fusion Financials, General Ledger and Expenses integrations, supplier data, BI Publisher (BIP), Oracle Database.

Integration and loading: REST APIs, SOAP web services, Worker and Expenses REST APIs, SFTP, XML, HCM Data Loader (HDL), File-Based Data Import (FBDI), scheduled, event-driven and file-based integrations, XSLT/XPath mapping, JSON, WSDL, OIC adapters, connections and lookups, ESS job submission, UCM.

Data: Oracle SQL, PL/SQL stored procedures, staging tables, data mapping and transformation, incremental extraction, validation and source-to-Fusion reconciliation.

Delivery: Development/Test/UAT/Production promotion, UAT support, monitoring, failure investigation, exception reporting, error handling and reprocessing.

Also: Oracle APEX (certified), Oracle VBCS (working knowledge), Oracle ADF (application support), Postman, Java.

PROFESSIONAL EXPERIENCE

Consultant I | Mastek

Ahmedabad, India | July 2024 - Present

- Built and deployed 20+ Oracle Integration Cloud integrations across Oracle Fusion HCM and Financials, owning assigned modules from technical design through testing, deployment and post-go-live support.
- Delivered integrations on three Oracle Fusion implementation projects from design through go-live, working within delivery teams of 15-20.
- Developed 10+ BI Publisher reports, used both as integration data sources (incremental and comparison extracts) and as standalone business reports.
- Promoted and validated integrations across Development, Test, UAT and Production; routine runs processed ~5,000 records and the largest daily file ~10,000 records.
- Supported live OIC integrations for 2 to 3 client environments concurrently, depending on the client, investigating run logs and exception reports, identifying root causes, and coordinating correction and reprocessing.
- Provided Oracle ADF application support for a UK local-government client alongside OIC support work.

SELECTED PROJECTS (MASTEK)

US Client | Oracle Fusion HCM and Expenses Integrations

- Built a retirement contribution integration that ingested pipe-delimited provider files over SFTP, staged and validated records in Oracle Database, and used PL/SQL with BI Publisher extracts to identify new and changed elections.
- Generated multi-level HDL files, submitted and monitored HCM loads, and mapped rejected records back to their source lines for exception reporting, notification and reprocessing.
- Eliminated manual expense-report creation for a workflow covering ~300 employees by converting approved spend authorizations into Oracle Expenses reports using incremental BI Publisher extracts and nested REST payloads for headers, lines and attachments.
- Delivered scheduled outbound integrations that sent Oracle Fusion reporting extracts to third-party SFTP locations.

ADDITIONAL INTEGRATION DELIVERY (MASTEK)

- General Ledger: Built FBDI journal imports, transforming source data, generating and uploading files, handling load errors, reconciling results and sending email notifications.
- Suppliers: Updated external supplier ratings in Oracle Fusion descriptive flexfields (DFFs) through REST APIs; supplier processing on one project covered ~700 suppliers.
- Employee lifecycle: Built an event-driven integration covering hire, update, termination and rehire through Oracle Worker REST APIs, comparing source and Fusion data to apply only changed fields.
- Employee bank accounts: Built daily full-load synchronization that skipped unchanged records, created missing banks and branches, associated accounts and deactivated replaced accounts through HDL, eliminating manual account creation for the workflow.
- Approval auto-delegation: Built integrations that maintained approval routing during employee absence.

CERTIFICATIONS

Oracle APEX Cloud Certified Developer Professional | Oracle | May 2025

Microsoft Certified: Azure Fundamentals; Microsoft Certified: Power Platform Fundamentals

EDUCATION

MBA, Finance | NMIMS

In progress | Expected 2028

B.Tech, Computer Science and Engineering | Parul University

2021 - 2024

Diploma, Computer Engineering | Gujarat Technological University

2018 - 2021
